The Strategic Landscape of “In the Country of Men”: A Deep Dive into Patriarchal Governance and Its Global Implications

In the realm of geopolitical analysis and socio-political frameworks, the phrase “in the country of men” evokes a potent metaphor for systems dominated by male authority, whether formal, cultural, or institutional. This concept transcends mere sociological observation; it represents a structural paradigm influencing law, governance, economic development, gender equity, and global diplomacy. Understanding “in the country of men” demands an integrated

exploration of historical evolution, institutional mechanisms, real-world manifestations, and evolving challenges in the 21st century. This comprehensive article dissects the term with analytical rigor, positioning it as a cornerstone for experts, policymakers, and researchers navigating the complexities of male-dominant societal architectures.

Defining “In the Country of Men”: Semantic Foundations and Contextual Nuance

The phrase “in the country of men” functions both literally and metaphorically. Literally, it describes nations where patriarchal norms pervade governance, social hierarchy, and cultural identity—where male leadership is not merely prevalent but structurally reinforced. Metaphorically, it critiques systems where masculine authority dominates decision-making, often marginalizing female voices and perpetuating gender inequities. Rooted in linguistic anthropology, the expression emerged from feminist scholarship and geopolitical discourse in the late 20th century, particularly in postcolonial studies and comparative political systems.

While no singular dictionary entry defines it, the concept integrates terms such as patriarchy, androcentrism, male-dominated governance, and gendered power structures. It contrasts with models emphasizing gender parity, inclusive leadership, and equitable social contracts. In academic literature, it is often linked to “male hegemony” (Connell, 1987) and “toxic masculinity” (Kimmel, 2015), framing “in the country of men” as a diagnostic lens for

identifying systemic gender imbalances.

Historical Evolution: From Ancient Patriarchy to Modern Authoritarian Masculinity

The roots of male-dominant governance stretch deep into human history. Pre-agricultural societies exhibited varied leadership models, but the advent of settled agriculture (c. 10,000 BCE) catalyzed entrenched patriarchal systems tied to land ownership, military dominance, and inherited status. In ancient Mesopotamia, Egypt, Greece, and Rome, legal codes such as Hammurabi's Code institutionalized male authority, restricting women's property rights and political participation.

Medieval feudal systems reinforced male supremacy through inheritance laws favoring male heirs, religious doctrines sanctifying male spiritual leadership, and military structures excluding women from combat and command. The Renaissance and Enlightenment eras, while advancing intellectual progress, largely preserved male-centric political philosophies—Hobbes' *Leviathan*, for instance, framed sovereignty through masculine sovereignty.

Colonialism further entrenched patriarchal governance across Africa, Asia, and the Americas, where European powers imported or reinforced male-dominant administrative models, often suppressing matrilineal or egalitarian indigenous systems. Post-independence nation-building in many regions perpetuated these structures, conflating national identity with masculine strength and military prowess. Thus, "in the country of men" emerged not as a transient

phenomenon but as a durable socio-political configuration, reshaped but not dismantled by modernity.

Mechanisms of Male-Dominant Governance: Structural Drivers and Institutional Reinforcement

Understanding “in the country of men” requires dissecting the mechanisms that sustain male dominance across political, economic, and cultural domains. These mechanisms operate both overtly and subtly, embedding masculinity into the fabric of institutions.

Political Structures and Leadership Dominance

In many patriarchal systems, political leadership remains disproportionately male. Globally, as of 2023, women hold only 26.5% of parliamentary seats, according to the Inter-Parliamentary Union. While Nordic countries lead with over 40%, regions in the Middle East, North Africa, and parts of Asia exhibit stark underrepresentation. This imbalance is reinforced by electoral systems favoring established male networks, cultural norms discouraging female candidacy, and institutional barriers such as lack of childcare support or political mentorship.

Political rhetoric often weaponizes masculine ideals—strength, decisiveness, assertiveness—while marginalizing collaborative or empathetic leadership styles traditionally associated with women.

This creates a feedback loop: male leaders shape policy narratives emphasizing security and hierarchy, which in turn legitimize male dominance. Campaign financing, media access, and party patronage further entrench male networks, limiting women's entry into power.

Economic Power and Gendered Labor Markets

Economic dominance in “in the country of men” manifests through systemic gender disparities. Globally, women earn 23% less than men on average, with wider gaps in developing economies.

Occupational segregation concentrates women in lower-paid, informal, or care-based sectors, while leadership roles in finance, technology, and engineering remain overwhelmingly male.

Entrepreneurial ecosystems reflect similar patterns: women-founded startups receive less than 2% of venture capital funding, despite evidence showing higher social impact and profitability in female-led ventures. Cultural narratives linking masculinity to risk-taking and innovation reinforce exclusion, while structural barriers—limited access to networks, collateral, and mentorship—hinder women's economic advancement. State policies often fail to address these gaps, perpetuating a cycle where male economic power sustains male political power.

Cultural and Social Reinforcement of Male

Authority

Cultural narratives embed male dominance in social fabric through family structures, education, and media. Patriarchal socialization begins early: boys are encouraged to assert dominance, compete, and suppress vulnerability, while girls are socialized toward care, compliance, and relational harmony. These norms shape leadership expectations and self-perception, limiting women's political ambition and public visibility.

Education systems in many “in the country of men” nations reinforce gendered expectations through curricula that glorify male leaders and historical figures, while women's contributions are minimized or framed as supportive. Media representations further entrench stereotypes—men as decision-makers, women as caregivers or objects—shaping public attitudes toward authority and competence.

Religious and traditional institutions often legitimize male authority through doctrines emphasizing male stewardship, paternal roles, or divine sanction. While interpretations vary, these narratives collectively reinforce gendered power hierarchies, making systemic change politically and socially challenging.

Real-World Applications and Global Case Studies

Examining “in the country of men” through specific national lenses reveals both common patterns and unique adaptations. Below are illustrative case studies highlighting structural dynamics, policy impacts, and emerging shifts.

Saudi Arabia: Patriarchal Monarchy and Gradual Reform

Saudi Arabia exemplifies a state where male dominance is constitutionally and culturally entrenched, rooted in Wahhabi Islam and tribal traditions. Historically, the Al Saud dynasty's legitimacy has relied on male leadership, with royal councils and executive power concentrated among male heirs. Women faced legal restrictions—guardianship laws, limited mobility, restricted workforce participation—until recent reforms under Vision 2030.

Since 2018, Saudi Arabia has lifted driving bans, expanded workforce access, and reformed guardianship systems, reflecting both geopolitical pressure and internal recalibration. While male dominance persists—especially in senior governance roles—the reforms signal a strategic shift toward gender inclusion to diversify the economy and project modernity. However, structural resistance remains, particularly in religious courts and conservative regions, illustrating the tension between top-down reform and entrenched patriarchal norms.

Nigeria: Ethnic Masculinity and Political Patronage Networks

In Nigeria, a federal republic with over 250 ethnic groups, “in the country of men” manifests through ethnic-based patronage systems where male elders and chiefs wield disproportionate political and economic power. In northern regions influenced by Islamic law and patrilineal clans, women's political participation is severely

constrained by cultural norms and legal ambiguities.

Despite constitutional guarantees of equality, only 5.3% of Nigerian parliamentarians are women, and female governors remain rare. Ethnic militias and local governance councils are overwhelmingly male, reinforcing a system where masculinity is synonymous with authority. Grassroots movements like the #BringBackOurGirls campaign and the Women's Rights Advancement and Protection Alternative (WRAPA) challenge these norms, yet structural barriers—violence, exclusion, poverty—persist.

Sweden: A Contrasting Model of Gender-Inclusive Governance

Sweden offers a compelling counterpoint, consistently ranking among the top three in global gender equality indices. Its democratic institutions, welfare state, and progressive social policies have dismantled formal male dominance, embedding gender equity into governance, economy, and culture.

Since the 1970s, Sweden implemented parental leave shared equitably between parents, expanded public childcare, and enforced quotas for female representation on corporate boards. These policies transformed labor market dynamics: women now hold 47% of political seats and 49% of managerial roles. The state actively combats gender norms through education and public campaigns, redefining masculinity as inclusive and nurturing.

This model demonstrates that systemic change is possible: when policy, culture, and institutions align, “in the country of men” evolves

into “a country of shared leadership.” Sweden’s success underscores that gender parity is not only a moral imperative but a driver of innovation, economic resilience, and social stability.

It moves alongside daily life, responding to moments of interest, quiet reflection, and renewed curiosity. And in that steady presence, knowledge remains not as a destination, but as something that stays close, ready whenever it is needed.

In the country of men—where patriarchal structures are not merely cultural artifacts but the foundational architecture of power—history, economy, and identity are inseparable from the gendered exercise of dominance. This is not a static relic of the past, but a living, evolving system shaped by centuries of conquest, industrialization, state formation, and global integration. To understand “in the country of men” is to trace how masculinity itself became a political instrument, how economic systems were engineered to entrench male authority, and how resistance has been both suppressed and reconfigured across generations. The origins of this system are deeply rooted in agrarian empires and early state formation, where control over land, labor, and lineage was monopolized by male lineages. In regions spanning the Middle East, South Asia, North Africa, and parts of Eastern Europe and Latin America—geographies often grouped under the symbolic rubric of “the country of men”—patrilineal inheritance, tribal law, and religious doctrines converged to codify male primacy. The Qur’an, Hindu dharmaśāstra, and European feudal codes all reinforced a worldview where men were not just stewards of property but arbiters of honor, justice, and spiritual

authority. Yet this was never a monolithic template; local customs, colonial interventions, and economic shifts produced a mosaic of expressions, each adapting core principles to specific historical pressures. The industrial revolution marked a pivotal transformation. As economies transitioned from agrarian to industrial, formal labor markets emerged—dominated by male-dominated sectors like mining, heavy manufacturing, and military service—reinforcing men’s centrality in public life. While women entered the workforce in growing numbers, especially during wartime, their roles were systematically devalued, segregated into lower-paid, precarious positions. The narrative of “breadwinner” masculinity emerged as a cornerstone of national identity, linking male economic contribution to national pride. In countries such as Saudi Arabia, Iran, and India, state-building projects often instrumentalized traditional masculinity to legitimize authority: the state as protector, the family as sacred unit, and male leadership as natural order. Economically, this gendered structure generated profound path dependencies. Industries shaped by and for male workers—industrial zones, defense contractors, construction—became the backbone of growth, while female labor remained underregulated and underrecognized. This imbalance skewed wage growth, limited social mobility for women, and entrenched a cycle where economic power flowed through male networks. Even as service economies expanded in the late 20th century, leadership in business, politics, and media remained disproportionately male. In the Gulf states, for instance, despite rapid modernization, corporate boardrooms and political councils remain overwhelmingly male, reflecting a continuity of power rather than transformation. The geopolitical dimension reveals

how masculinity functions as a tool of statecraft and international positioning. In many of these nations, national strength is rhetorically and symbolically tied to masculine ideals: military prowess, territorial sovereignty, and unyielding sovereignty. The Gulf monarchies, for example, project power through megaprojects—Burj Khalifa, NEOM, futuristic military bases—each project embodying masculine vision: ambition, control, and permanence. This performative masculinity shapes foreign policy, often manifesting as assertive regional posturing or resistance to external criticism on gender issues, framed as defense of cultural authenticity. Yet beneath this surface of invincibility lies a complex undercurrent of tension. Economic necessity has forced inclusion, and global pressure—from human rights frameworks to transnational feminist movements—has challenged the status quo. The rise of female education, digital connectivity, and economic participation has created new pressures: in Iran, young women’s defiance in public spaces—burning hijabs, rejecting mandatory dress codes—has become a daily act of resistance, challenging the state’s gendered authority. In India, the #MeToo movement exposed systemic abuse in workplaces and institutions, forcing a reckoning with how male power operates through silence and patronage. Experts highlight that the persistence of male dominance is not simply tradition but a self-reinforcing system. Sociologist Amartya Sen argues that “power is not only about control over resources but the ability to define reality—who speaks, who is heard, who is rendered visible.” In the country of men, masculine narratives dominate media, education, and law, shaping what is considered legitimate knowledge and acceptable behavior. This epistemic dominance constrains alternatives: when

national identity is tied to male heroism, any critique of gender hierarchy risks being dismissed as unpatriotic or Western-imposed. Controversies erupt when gender norms collide with modernization. In Saudi Arabia, Vision 2030 promises economic diversification and limited social reforms—women driving, driving cars, entering sports—yet these changes coexist with strict gender segregation and male guardianship systems. The state's selective modernization reflects a strategic recalibration: retaining masculine legitimacy while cautiously opening space for female agency. Critics argue this is a managed transition, designed to preserve male authority under a reformed guise. Similarly, in parts of Afghanistan under Taliban rule, regressive gender policies are justified through a rigid interpretation of Islamic law, framing male dominance as divine mandate—yet this ignores centuries of pre-Islamic gender pluralism and local variations. The risks of this system are multidimensional. Economically, excluding half the population limits innovation and productivity. Studies by the World Bank show that gender-inclusive economies grow faster and more sustainably; yet patriarchal structures persist due to entrenched interests. Socially, the suppression of male vulnerability—stigma around mental health, emotional expression—fuels toxic masculinity, contributing to high rates of violence, substance abuse, and suicide. Politically, rigid gender roles stifle democratic participation: when citizenship is defined through male leadership, pluralism suffers. Environmental policy, too, reflects this gap: male-dominated decision-making often prioritizes short-term growth over long-term sustainability, despite growing evidence that inclusive governance improves ecological outcomes. Comparisons with other societies reveal both contrasts

and convergences. In Nordic nations, gender equality has advanced through state policy, economic incentives, and cultural shifts—resulting in more balanced leadership and social outcomes. Yet even there, backlash persists, showing that systemic change requires sustained effort. In contrast, “in the country of men” nations face unique challenges: modernization is often externally driven (through globalization or reform agendas), triggering defensive nationalism that doubles down on traditional masculinity. This creates a paradox: progress toward equality is perceived as a threat to sovereignty, even as stagnation risks long-term instability. Looking ahead, the trajectory depends on several factors. Demographic shifts—youth bulges, urbanization, digital natives—will accelerate demand for inclusion. Gen Z in the region, connected via social media and exposed to global narratives, is redefining masculinity through new lenses: accountability, emotional intelligence, and shared leadership. Yet institutional inertia remains strong. Meaningful change requires more than symbolic gestures: it demands legal reform (anti-discrimination laws, equal inheritance), investment in female education and entrepreneurship, and cultural interventions that reframe masculinity as a responsibility, not a privilege. Strategic insight suggests that transformation cannot come from outside alone. It must emerge from within—through grassroots movements, progressive religious reinterpretations, and male allies who challenge norms. The rise of female political figures, such as Jordan’s Prime Minister Bisher Al-Khasawneh’s female ministers or Pakistan’s female provincial leaders, signals incremental but critical shifts. When men in authority model humility, collaboration, and equity, it reconfigures expectations across generations.

Economically, the cost of exclusion is becoming unignorable. The IMF estimates that closing gender gaps in labor force participation could boost GDP by 30% in many developing nations. Tech hubs in Riyadh, Dubai, and Bangalore are experimenting with inclusive cultures, attracting global talent and investment. Yet these initiatives risk becoming enclaves unless paired with systemic change—education reform, legal parity, and dismantling patronage networks that sustain male dominance. Globally, “the country of men” is not an isolated case but part of a broader pattern where power remains gendered. Yet its unique fusion of tradition, oil wealth, and strategic nationalism gives it distinctive dynamics. As climate crises, migration, and technological disruption reshape the world, the ability of these societies to adapt—by redefining masculinity, not just gender—will determine not only their own futures but their role in a multipolar order. The path is fraught with resistance. But history teaches that systems built on exclusion are never static. They evolve, fracture, and sometimes collapse—not because of external force alone, but through the quiet, relentless work of individuals who challenge the myth of unchallenged male authority. In “the country of men,” the most powerful revolution may begin not with a riot, but with a man choosing to listen—to a woman, to a child, to a future that demands more than dominance.

The Historical Foundations of Masculine Power

The architecture of male dominance in “the country of men” was erected over centuries, forged in the crucible of empire, religion, and

agrarian control. Long before modern nation-states, ancient civilizations from Mesopotamia to the Indus Valley established legal codes that privileged male ownership—of land, of children, of inheritance. The Code of Hammurabi, one of the earliest written legal systems, assigned sons the right to inherit while prescribing severe penalties for women's property disputes. In the Vedic tradition, Hindu law codified patrilineal descent, embedding male authority in spiritual doctrine. Similarly, early Islamic jurisprudence, while granting women rights to property and divorce, framed male guardianship (*wilaya*) as a protective duty, institutionalizing male decision-making over female lives. These systems were not abstract; they were enforced through social norms, religious authority, and state power. Feudal hierarchies in medieval Persia and the Ottoman Empire extended male control into private spheres, where honor and family reputation became tools of male surveillance. In agrarian economies, land was the foundation of wealth and status—owned almost exclusively by men—and agricultural labor was organized around male kinship units, reinforcing male leadership as natural and necessary. The transition from tribal confederacies to centralized states only solidified this: kings, caliphs, and emperors derived legitimacy from male lineage, often claiming divine sanction. Yet this system was never monolithic. Pre-Islamic Arabian tribes, for instance, practiced forms of matrilineal inheritance in certain lineages, and Sufi mysticism elevated spiritual authority regardless of gender in some contexts. In South Asia, Bhakti movements challenged caste and gender hierarchies through devotional egalitarianism, though rarely altering structural power. These exceptions reveal that while patriarchy was

dominant, it was contested—often marginalized but never eradicated. The real consolidation came with colonialism and industrialization. European powers, exporting their own gendered models—Victorian ideals of separate spheres, nuclear family—often reinforced existing hierarchies or created new ones. In India, British land reforms disrupted traditional communal ownership, pushing men into formal titleholders, consolidating patriarchal control. In the Middle East, colonial boundaries and state-building projects merged traditional tribal authority with bureaucratic governance, entrenching male figures as state representatives. Industrialization further solidified male dominance: factories demanded disciplined, male labor; women were pushed into informal, low-wage sectors or excluded entirely. The myth of the male breadwinner, tied to national progress, became a linchpin of state ideology.

Economic Structures and the Male Ghetto

The industrial and post-industrial economies of “the country of men” evolved in ways that systematically excluded women from core economic power. Manufacturing, construction, and energy sectors—key drivers of growth—remained male-dominated, shaped by workplace cultures that valorized physical strength, long hours, and hierarchical authority—traits culturally coded as masculine. Even as service economies expanded, leadership roles in finance, technology, and energy remained overwhelmingly male. In Saudi Arabia’s oil sector, for example, senior engineering and executive positions are still held by men, despite growing female participation in education and professional training. This exclusion is not merely demographic; it is structural. Labor laws in many such nations

restrict women's mobility, limit night work, and require male guardian consent for employment—policies that persist despite global human rights standards. The result is a dual economy: one formal and male-centric, the other informal and female-dense. Domestic work, childcare, and informal trade—largely female—are undervalued, unregulated, and invisible in national accounts, reinforcing economic dependence. The global shift toward knowledge economies and digital innovation presents both threat and opportunity. Automation threatens male-dominated blue-collar jobs, while tech sectors promise new pathways—yet women face barriers: gendered education tracking, lack of mentorship, and workplace cultures resistant to change. In the UAE, initiatives like the Women's Empowerment Strategy aim to increase female participation in tech and leadership, but progress remains uneven. The key question is not whether women can enter these fields, but whether systems will adapt to redistribute power, not just access.

Geopolitics and the Performance of Masculinity

In the geopolitical arena, masculinity is not personal—it is performative, woven into statecraft, foreign policy, and military doctrine. Nations in “the country of men” often leverage masculine symbolism to project strength, sovereignty, and resilience. Saudi Arabia's Vision 2030, for instance, combines economic diversification with grandiose projects like NEOM—a futuristic city designed to signal modernity while embedding male-led governance. The state's narrative of “guardianship” over women's modesty and

morality is tied to national identity, framing reform as a managed evolution rather than rupture. Military power remains a central stage. The region's defense budgets are among the world's highest, with conscription, combat roles, and strategic posturing reinforcing masculine ideals of courage and duty. In Iran, the Islamic Revolutionary Guard Corps (IRGC) embodies a martial masculinity: loyalty, sacrifice, and unwavering commitment to the state's ideological mission. Military service is not just duty—it is a rite of passage, a marker of manhood. This fusion of nationalism and militarism shapes domestic politics, where dissent is often equated with weakness, and leadership is validated through displays of strength. Diplomatically, “the country of men” often resists gender equality as a Western imposition, framing it as cultural erosion. Yet this resistance masks deeper anxieties: rapid social change threatens traditional power structures, and international pressure—over human rights, climate policy, migration—forces recalibration. Diplomats and leaders navigate this tension, balancing domestic legitimacy with global expectations. Qatar's hosting of the 2022 World Cup, for example, included investments in women's sports and workplace equality, but these advances coexist with restrictive guardianship laws, illustrating the selective modernization that sustains male authority.

Controversies, Risks, and the Strain of Tradition

The persistence of masculine dominance generates profound risks—social, economic, and political. Socially, rigid gender roles

stifle individual potential: men face pressure to suppress vulnerability, leading to high suicide rates in countries like Iran and Saudi Arabia. Women's exclusion from leadership limits policy innovation; decisions on education, health, and economic development suffer from gendered blind spots. Economically, the underutilization of female talent constrains growth—World Bank estimates suggest gender-inclusive economies grow 10–25% faster. Politically, the system breeds instability. Youth bulges, educated and connected, challenge inherited hierarchies. In Iraq and Lebanon, protests have demanded not just reform, but an end to sectarian and gendered patronage networks. When male elites resist inclusion, backlash fuels polarization. Religious conservatism often aligns with masculine authority, framing reform as
