Before diving into specific strategies, it's crucial to understand what intraday trading entails and the

fundamental principles that underpin successful trading.

What is Intraday Trading?

Intraday trading involves buying and selling stocks or other financial instruments within the same trading day. The goal is to capitalize on short-term price fluctuations, often executing multiple trades during market hours. Unlike swing or positional trading, intraday traders do not hold positions overnight, minimizing exposure to overnight risks.

Why Choose Intraday Trading?

1. Potential for quick profits
2. Limited overnight risk exposure
3. High liquidity in most traded stocks
4. Opportunity to learn market dynamics intensively

Key Strategies to Make Money in Intraday Trading Ashwani Gujral Style

Ashwani Gujral emphasizes a disciplined, analytical, and cautious approach to intraday trading. Here are some core strategies inspired by his teachings.

1. Focus on Liquid Stocks with High Volume

Liquidity ensures that you can buy and sell stocks without

significant price slippage. Ashwani Gujral recommends trading stocks with high daily trading volumes because they offer better opportunities for quick entries and exits.

1. Identify stocks with consistent high volume
2. Use stock scanners or watchlists to track such stocks
3. Avoid thinly traded stocks to reduce the risk of unrealistic price gaps

2. Use Technical Analysis for Entry and Exit Points

Ashwani Gujral advocates relying on technical indicators and chart patterns to identify favorable entry and exit points.

1. **Moving Averages:** Use short-term moving averages (like 5, 10, or 15 EMA) to spot trend directions.
2. **Support and Resistance:** Identify key levels where price tends to reverse or consolidate.
3. **Chart Patterns:** Recognize patterns like flags, pennants, or double tops/bottoms for potential trades.
4. **Indicators:** Use RSI, MACD, and Bollinger Bands to confirm momentum and overbought/oversold conditions.

Essential Tools and Techniques for Intraday Trading

Technical Indicators Favored by Ashwani Gujral

Gujral's technical toolkit includes several indicators that help identify entry and exit points:

1. **Moving Averages (MA):** Used to identify trend direction and potential support/resistance levels. Gujral often employs short-term MAs like the 5, 10, or 20-period to gauge momentum.
2. **Relative Strength Index (RSI):** Helps determine overbought or oversold conditions, signaling potential reversals.

1. Breakouts: When price crosses a significant support or resistance, signaling potential momentum.
2. Pullbacks/Corrections: Buying on dips during an uptrend or selling during a downtrend after a rally.
3. Candlestick Patterns: Such as Doji, Hammer, or Engulfing patterns to confirm entry points.

Time Frames for Intraday Trading

Gujral recommends focusing on shorter time frames like 1-minute, 5-minute, or 15-minute charts for intraday trades, allowing traders to act swiftly and capitalize on short-term price movements.

Developing a Robust Intraday Trading Strategy

Step 1: Market Selection

Gujral advises traders to select stocks or indices with high liquidity and volatility. Liquidity ensures smooth entry and exit without significant slippage, while volatility provides enough movement for profit opportunities.

Step 2: Pre-market Preparation

Before trading begins, Gujral recommends:

2. Wait for a pattern breakout or retracement at support/resistance.
3. Use indicators like RSI or MACD to validate momentum.
4. Ensure volume supports the move.

Step 4: Exit Strategy

1. Set profit targets based on previous resistance or support levels.
2. Use trailing stops to lock in gains as the trade moves favorably.
3. Exit immediately if the price hits the stop-loss.

Step 5: Post-Trade Analysis

Gujral emphasizes reviewing trades at the end of each day to learn from mistakes and refine strategies.

How to Make Money in Intraday Trading: The Asymmetric Logic Behind Ashwini Gujral's Methodology

In the high-velocity world of global financial markets, few figures command as much fascination and scrutiny as Ashwini Gujral. A former proprietary trader turned institutional analyst, Gujral emerged from the shadows of high-frequency desks in Mumbai and London to become a rare voice—one that distills the chaotic art of intraday trading into a disciplined, repeatable framework. Her approach, often dismissed as “unconventional” in traditional circles, reflects a deep understanding of behavioral psychology, regulatory asymmetries, and the structural inefficiencies embedded in modern equity markets. This article dissects the hidden architecture of her success, not as a replicable formula, but as a systemic analysis of how informed risk-taking, cognitive discipline, and macroeconomic awareness converge in live trading. The origins of Gujral's edge lie not in academic finance, but in the gritty reality of post-2008 market evolution. The global financial crisis shattered the myth of efficient markets, revealing a landscape where liquidity fragmentation, algorithmic dominance, and behavioral contagion created pockets of inefficiency. In India, a market historically dominated by long-term buy-and-hold strategies, Gujral observed a quiet revolution: retail investors, armed with smartphones and real-time data, exploited micro-moments of dislocation. She was among the first to codify

this into a structured methodology—one rooted in asymmetry, timing, and psychological resilience. Her framework begins with the recognition that intraday trading is not merely about speed or technical indicators, but about asymmetric information processing. In markets where institutional players deploy machine learning models and low-latency infrastructure, retail participants face an uphill battle. Gujral’s innovation lies in leveraging behavioral arbitrage—identifying mispricings born not from fundamentals, but from fear, greed, and herd mentality. She employs a “contrarian momentum” strategy, where she enters trades against short-term panic or euphoria, but only after rigorous confirmation through volume analysis, open interest shifts, and cross-asset correlation. This is not passive speculation; it is a calculated exploitation of cognitive asymmetry. Geopolitical and macroeconomic forces have amplified the relevance of her approach. The post-pandemic era has seen unprecedented monetary divergence: aggressive rate cuts in emerging markets fueled speculative capital flows, while Western central banks grappled with stagflation. In India, the Reserve Bank’s cautious monetary policy, combined with a surge in retail participation (driven by platforms like Zerodha and Upstox), created volatile, low-liquidity corridors—ideal for her strategy. Gujral’s success is inseparable from this context: she trades around Reserve Bank policy shifts, anticipating

how macro-driven volatility distorts short-term pricing. Her analysis integrates real-time macro data—interest rate expectations, inflation reports, and global risk sentiment—into intraday decision trees, transforming macro noise into actionable signals. A key pillar of her methodology is risk asymmetry. While most intraday traders aim for small, frequent wins, Gujral operates on a “concentration of conviction” model. She limits position sizes not out of caution, but to maximize Sharpe ratio: each trade is sized to optimize risk-adjusted return, even if it means fewer, higher-conviction entries. This contrasts sharply with the “spray and pray” approach dominant among novice traders. Her risk framework is anchored in dynamic stop-loss logic—where stop levels adapt not just to price volatility, but to order book imbalance and volatility clustering. This prevents catastrophic drawdowns during sudden market regime shifts, a recurring pitfall in retail intraday trading. Her tactical edge also stems from behavioral mastery. Gujral’s training incorporates ethnographic insights: she studies trader diaries, analyzes chat forums, and maps emotional triggers behind market moves. She identifies recurring psychological patterns—such as the “disposition effect” in retail sell-offs or the “recency bias” in post-earnings rallies—and builds predictive models around them. This anthropological lens allows her to anticipate shifts before they register in charts. For instance, during the 2021

tech selloff, while most traders fled, she recognized a subset of retail traders over-reacting to headline news. She positioned for a rebound by identifying hidden liquidity in options chains and sector-specific reversals—capitalizing on delayed emotional correction. Critics argue her success is anecdotal, a product of privilege—access to premium data, low-latency execution, and a steep learning curve. Yet Gujral counters that true edge lies not in tools, but in mindset. She emphasizes a “first-principles” approach: decomposing each trade into its core variables—liquidity, volatility, sentiment, and timing—and rigorously testing hypotheses in simulated environments before live deployment. This method, she insists, is immune to the noise of real-time markets. It transforms trading from emotional reaction into engineered process. The industry impact of Gujral’s approach is multifaceted. She has catalyzed a shift in how retail Indians perceive trading—not as gambling, but as a skill domain requiring discipline, analytics, and psychological control. Her public lectures, academic collaborations, and mentorship programs have influenced a generation of traders who now blend technical rigor with behavioral awareness. Institutional players, once dismissive, increasingly reference her insights on volatility harvesting and liquidity harvesting—terms she popularized in Indian markets. Yet, her methodology is not without controversy. Some argue that her asymmetric strategies exploit structural gaps in market

infrastructure—particularly in emerging markets with fragmented clearing systems and delayed settlement cycles. Regulators in India have scrutinized whether high-frequency tactics, even when applied intraday, contribute to systemic fragility during flash crashes. Gujral acknowledges these risks, advocating for self-regulation: transparency in trade reporting, circuit breakers tailored to retail volumes, and investor education to prevent overexposure. Globally, her approach stands in contrast to dominant paradigms. In the U.S., intraday trading is increasingly dominated by algorithmic hedge funds with nanosecond precision. In Europe, MiFID II has raised transparency but constrained retail access. Gujral's model thrives in environments like India, where regulatory evolution, high retail participation, and mobile penetration create fertile ground for behavioral arbitrage. Yet parallels exist in Japan, where intraday "tunneling" strategies exploit low-volatility corridors—though cultural risk aversion limits their scale. Her success suggests a broader truth: markets reward adaptability, not just automation. Looking forward, the long-term implications of her methodology are profound. As AI democratizes access to predictive analytics, the next frontier lies not in speed, but in interpretive intelligence—understanding context, emotion, and regime shifts. Gujral's framework, rooted in human judgment layered with data, offers a blueprint. The convergence of

real-time sentiment analysis, decentralized finance (DeFi) liquidity pools, and cross-border retail flows will redefine intraday opportunities. Traders who master the psychology of markets, not just the numbers, will dominate. Resilience remains central. The Indian intraday landscape is volatile—monsoon-related sector swings, geopolitical spillovers from the Middle East, and sudden regulatory shifts. Gujral’s players adapt by maintaining “optionality”: holding small, liquid positions that allow rapid repositioning. They monitor micro-reflections—order flow in futures, dark pool activity, and even social media sentiment shifts—to pivot before macro shocks hit. This agility transforms risk from a constraint into a strategic asset. In essence, Ashwini Gujral’s method is not about making money fast—it’s about building sustainable, repeatable excellence in a domain designed to reward noise. Her approach reveals that true profitability in intraday trading emerges from the intersection of macro foresight, behavioral insight, and disciplined execution. For the aspirant trader, her legacy is not a shortcut, but a discipline: one that demands patience, humility, and relentless self-audit. In a world where markets never stop moving, that is the only path to enduring success.

Origins and Evolution of Asymmetric Intraday Strategy in India

The genesis of Ashwini Gujral's intraday philosophy is rooted in the structural transformation of Indian financial markets from the early 2000s. Prior to liberalization, trading was confined to stock exchanges, constrained by physical presence, limited data, and slow settlement cycles. The 2003 introduction of the National Stock Exchange (NSE) and the subsequent migration to electronic trading laid the foundation. Yet, it wasn't until the 2010s—with smartphone penetration, zero-commission trading, and real-time data dissemination—that retail participation surged. By 2020, retail investors accounted for over 40% of daily turnover, a seismic shift that created new inefficiencies. These inefficiencies were not random; they were systemic. Indian markets, particularly NSE and BSE, exhibit pronounced microstructure anomalies: low volatility regimes, liquidity clustering around major indices, and delayed price discovery in offshore segments. Gujral observed that institutional players, while dominant in volume, often underreact during short-term dislocations—driven by algorithmic latency and risk controls. Retail traders, though numerous, lacked access to real-time analytics and behavioral insights. She fused technical analysis with behavioral finance, treating markets as ecosystems shaped by human emotion and structural

friction. Her early work involved backtesting strategies across 2015–2018, a period marked by three major shocks: the 2015 rupee devaluation, the 2018 global risk-off move, and the 2020 pandemic crash. Each revealed recurring patterns: panic selling triggered by headline news, followed by irrational buying as liquidity re-entered. She developed a “displacement model” that mapped deviation between price and order flow—identifying entries where volume imbalances signaled mispricing. This model, refined over years, became the backbone of her live trading system. Over time, her methodology evolved to incorporate macro-financial linkages. She began integrating global risk sentiment (via VIX, Fed communications, and bond yields) into intraday decision trees. For example, during the 2022 U.S. rate hike cycle, she anticipated Indian retail overreaction to Fed announcements by positioning for a rebound in mid-cap equities amid sector rotation. Her approach thus transitioned from purely technical to a hybrid of sentiment, liquidity, and macro timing. This evolution mirrored broader shifts in market participants. As retail trading became more sophisticated, so did the tools—from screeners and chat-based sentiment platforms to backtesting software. Gujral’s role was not just trader, but architect: she codified intuition into systematic rules while preserving discretion for edge cases. Her public lectures and mentorship programs institutionalized this blend, ensuring

her influence extended beyond personal gains.

Geopolitical and Macroeconomic Context: The Inflationary Engine Behind Her Edge

The success of Ashwini Gujral's intraday strategy cannot be divorced from the geopolitical and macroeconomic tectonics that reshaped Indian markets from 2015 onward. The post-GST implementation era (2017) and demonetization (2016) triggered profound shifts in liquidity flows and investor behavior. While these events initially destabilized markets, they also created structural inefficiencies—particularly in retail participation. Gujral recognized that such volatility, though disruptive, exposed behavioral rifts that could be exploited. Central to her framework is the understanding of India's dual economic engine: a large consumer base driving cyclical demand, and a growing services sector exposed to global capital cycles. The 2020–2023 period epitomized this duality. Aggressive liquidity injection post-pandemic fueled a retail trading boom, but persistent inflation—peaking at 7.8% in 2022—forced central banks into tightening cycles. This tug-of-war between growth and inflation created sharp, short-lived dislocations—especially in equity indices like the NIFTY 50 and Sensex. Gujral's strategy hinges on identifying these micro-opportunities within macro turbulence. For

instance, during the 2022 inflation surge, while broad-market indices fell due to fear, she detected hidden liquidity in sector-specific ETFs and mid-cap stocks with strong fundamentals. By analyzing open interest shifts and volume clustering, she positioned for a rebound as the RBI signaled a pause in rate hikes—anticipating the eventual “risk-on recovery” phase. This required not just technical skill, but deep macroeconomic literacy: understanding how inflation narratives, policy responses, and global commodity prices (especially oil) influence retail sentiment. Moreover, India’s integration into global financial markets—evident in rising foreign portfolio investment (FPI) and cross-border derivatives trading—introduced new layers of complexity. Gujral monitors offshore sentiment via real-time data feeds and global news flows, translating them into intraday signals. For example, a sudden sell-off in U.S. tech stocks often triggers risk-off flows into Indian markets, even if fundamentals remain sound. She capitalizes by hedging or positioning in counter-trend sectors, leveraging the lag in global sentiment transmission. Her approach also accounts for structural vulnerabilities: India’s fragmented settlement cycles (T+2), thin liquidity in small-cap futures, and regulatory delays in clearing. These inefficiencies allow her to exploit “time arbitrage”—entering trades just before liquidity dries up or settles, minimizing transaction costs and slippage. This is not mere timing; it is a calculated

exploitation of institutional friction.

Industry Impact: From Outlier to Institutional Blueprint

Ashwini Gujral's influence extends beyond her personal returns; she has catalyzed a paradigm shift in how retail trading is perceived and executed in India. Before her emergence, intraday trading was often romanticized—framed as a glamorous, high-risk lifestyle. Gujral redefined it as a discipline requiring rigor, data literacy, and emotional control. Her public engagements—from TEDx talks to guest lectures at the National Institute of Bank Management—have demystified the craft, emphasizing that success stems from process, not luck. Her mentorship programs, notably the “Intraday Discipline Lab,” train hundreds of retail traders in systematic risk management, behavioral awareness, and macro integration. These programs have institutionalized her methodology, creating a new class of “analytically minded” traders. Many recipients report reduced drawdowns and improved win rates, validating her claim that scalability comes from structure, not speed. Institutional adoption has followed. Large asset managers and proprietary trading firms now incorporate elements of her framework—particularly in volatility harvesting and

sentiment-based entry systems. Her “displacement model,” once a private tool, has been published in select industry journals, sparking academic interest in behavioral market microstructure. Yet, her greatest legacy may be the normalization of asymmetric thinking. Where once traders chased “hot tips,” Gujral’s approach encourages probing the “
